

Szkolenie: Google Cloud Logging, Monitoring and Observability in Google Cloud

DOSTĘPNE TERMINY

- 2024-07-29 | 2 dni | Kraków / Wirtualna sala
- 2024-07-29 | 2 dni | Virtual Classroom
- 2024-11-04 | 2 dni | Virtual Classroom
- 2024-11-04 | 2 dni | Warszawa / Wirtualna sala

Cel szkolenia:

This course teaches participants techniques for monitoring and improving infrastructure and application performance in Google Cloud. Using a combination of presentations, demos, hands-on labs, and real-world case studies, attendees gain experience with full-stack monitoring, real-time log management and analysis, debugging code in production, tracing application performance bottlenecks, and profiling CPU and memory usage.

Course objectives

- Explain the purpose and capabilities of Google Cloud's operations suite.
- Implement monitoring for multiple cloud projects.
- Create alerting policies, uptime checks and alerts.
- Install and manage Ops Agent to collect logs for Compute Engine.
- Explain Cloud Operations for GKE.
- Analyze VPC Flow Logs and firewall rules logs.
- Analyze and export Cloud Audit Logs instances.
- Profile and identify resource-intensive functions in an application.
- Analyze resource utilization cost for monitoring related components within Google Cloud.

Audience

- Cloud architects, administrators, and SysOps personnel
- Cloud developers and DevOps personnel

Plan szkolenia:

- Module 1 Introduction to Google Cloud Operations Suite
 - Objectives
 - Describe the purpose and capabilities of Google Cloud's operations suite
 - Explain the purpose of the Cloud Monitoring tool.
 - Explain the purpose of Cloud Logging and Error Reporting tools.
 - Explain the purpose of Application Performance Management tools.
 - Activities
 - 1 quiz
- Module 2 Monitoring Critical Systems
 - Objectives
 - Use Cloud Monitoring to view metrics for multiple cloud projects.
 - Explain the different types of dashboards and charts that can be built.
 - Create an uptime check.
 - Explain the cloud operations architecture.
 - Explain and demonstrate the purpose of using Monitoring Query Language (MQL) for monitoring.
 - Activities
 - 1 quiz
 - 1 lab
- Module 3 Alerting Policies
 - Objectives
 - Explain alerting strategies.
 - Explain alerting policies.
 - Explain error budget.
 - Explain why server-level indicators (SLIs), service-level objectives (SLOs), and service-level agreements (SLAs) are important.
 - Identify types of alerts and common uses for each.
 - Use Cloud Monitoring to manage services.
 - Activities
 - 1 quiz
 - 1 labs
- Module 4 Advanced Logging and Analysis
 - Objectives
 - Use Log Explorer features.

- Explain the features and benefits of logs-based metrics.
- Define log sinks (inclusion filters) and exclusion filters.
- Explain how BigQuery can be used to analyze logs.
- Export logs to BigQuery for analysis.
- Use log analytics on Google Cloud.
- Activities
 - 1 quiz
 - 1 lab
- Module 5 Working with Audit Logs
 - Objectives
 - Explain Cloud Audit Logs.
 - List and explain different audit logs.
 - Explain the features and functionalities of the different audit logs.
 - List the best practices to implement audit logs.
 - Activities
 - 1 quiz
 - 1 lab
- Module 6 Configuring Google Cloud Services for Observability
 - Objectives
 - Use the Ops Agent with Compute Engine.
 - Enable and use Kubernetes Monitoring.
 - Explain the benefits of using Google Cloud Managed Service for Prometheus.
 - Explain the usage of PromQL to query Cloud Monitoring metrics.
 - Explain the uses of Open Telemetry.
 - Explain custom metrics.
 - Activities
 - 1 quiz
 - 1 lab
- Module 7 Monitoring Google Cloud Network and Data Access
 - Objectives
 - Collect and analyze VPC Flow Logs and firewall rules logs.
 - Enable and monitor Packet Mirroring.
 - Explain the capabilities of the Network Intelligence Center.
 - Activities
 - 1 quiz
 - 1 lab

- Module 8 Investigating Application Performance Issues
 - Objectives
 - Explain the features and benefits of Error Reporting, Cloud Trace, and Cloud Profiler.
 - Explain the functionalities of the Error Reporting, Cloud Trace, and Cloud Profiler.
 - Activities
 - 1 quiz
 - 1 lab
- Module 9 Optimizing the Costs for Operations Suite
 - Objectives
 - Analyze resource utilization cost for monitoring related components within Google Cloud.
 - Implement best practices for controlling the cost of monitoring within Google Cloud.
 - Activities
 - 1 quiz

Wymagania:

To get the most out of this course, participants should:

- Have completed the Google Cloud Fundamentals: Core Infrastructure course or have equivalent experience.
- Have basic scripting or coding familiarity.
- Be proficient with command-line tools and Linux operating system environments.

Poziom trudności

Certyfikaty:

The participants will obtain certificates signed by Google Cloud.

Prowadzący:

Authorized Google Cloud Trainer.
