

## Szkolenie: AWS DevOps Engineering on AWS

### DOSTĘPNE TERMINY

2026-05-13 | 3 dni | Kraków / Wirtualna sala (Promocja)  
2026-06-08 | 3 dni | Virtual  
2026-06-17 | 3 dni | Warszawa / Wirtualna sala (Promocja)

### Cel szkolenia:

DevOps Engineering on AWS teaches you how to use the combination of DevOps cultural philosophies, practices, and tools to increase your organization's ability to develop, deliver, and maintain applications and services at high velocity on AWS. This course covers Continuous Integration (CI), Continuous Delivery (CD), infrastructure as code, microservices, monitoring and logging, and communication and collaboration. Hands-on labs give you experience building and deploying AWS CloudFormation templates and CI/CD pipelines that build and deploy applications on Amazon Elastic Compute Cloud (Amazon EC2), serverless applications, and container-based applications. Labs for multi-pipeline workflows and pipelines that deploy to multiple environments are also included.

### Course objectives

In this course, you will:

- Use DevOps best practices to develop, deliver, and maintain applications and services at high velocity on AWS
- List the advantages, roles and responsibilities of small autonomous DevOps teams
- Design and implement an infrastructure on AWS that supports DevOps development projects
- Leverage AWS Cloud9 to write, run and debug your code
- Deploy various environments with AWS CloudFormation
- Host secure, highly scalable, and private Git repositories with AWS CodeCommit
- Integrate Git repositories into CI/CD pipelines
- Automate build, test, and packaging code with AWS CodeBuild
- Securely store and leverage Docker images and integrate them into your CI/CD pipelines
- Build CI/CD pipelines to deploy applications on Amazon EC2, serverless applications, and container-based applications
- Implement common deployment strategies such as "all at once," "rolling," and "blue/green"
- Integrate testing and security into CI/CD pipelines
- Monitor applications and environments using AWS tools and technologies

## Intended audience

This course is intended for:

- DevOps engineers
- DevOps architects
- Operations engineers
- System administrators
- Developers

## Plan szkolenia:

- Module 1: Introduction to DevOps
  - What is DevOps?
  - The Amazon journey to DevOps
  - Foundations for DevOps
- Module 2: Infrastructure Automation
  - Introduction to Infrastructure Automation
  - Diving into the AWS CloudFormation template
  - Modifying an AWS CloudFormation template
  - Demonstration: AWS CloudFormation template structure, parameters, stacks, updates, importing resources, and drift detection
- Module 3: AWS Toolkits
  - Configuring the AWS CLI
  - AWS Software Development Kits (AWS SDKs)
  - AWS SAM CLI
  - AWS Cloud Development Kit (AWS CDK)
  - AWS Cloud9
  - Demonstration: AWS CLI and AWS CDK
  - Hands-on lab: Using AWS CloudFormation to provision and manage a basic infrastructure
- Module 4: Continuous integration and continuous delivery (CI/CD) with development tools
  - CI/CD Pipeline and Dev Tools
  - Demonstration: CI/CD pipeline displaying some actions from AWS CodeCommit, AWS CodeBuild, AWS CodeDeploy and AWS CodePipeline
  - Hands-on lab: Deploying an application to an EC2 fleet using AWS CodeDeploy
  - AWS CodePipeline
  - Demonstration: AWS integration with Jenkins
  - Hands-on lab: Automating code deployments using AWS CodePipeline

- Module 5: Introduction to Microservices
  - Introduction to Microservices
- Module 6: DevOps and containers
  - Deploying applications with Docker
  - Amazon Elastic Container Service and AWS Fargate
  - Amazon Elastic Container Registry and Amazon Elastic Kubernetes service
  - Demonstration: CI/CD pipeline deployment in a containerized application
- Module 7: DevOps and serverless computing
  - AWS Lambda and AWS Fargate
  - AWS Serverless Application Repository and AWS SAM
  - AWS Step Functions
  - Demonstration: AWS Lambda and characteristics
  - Demonstration: AWS SAM quick start in AWS Cloud9
  - Hands-on lab: Deploying a serverless application using AWS Serverless Application Model (AWS SAM) and a CI/CD Pipeline
- Module 8: Deployment strategies
  - Continuous Deployment
  - Deployments with AWS Services
- Module 9: Automated testing
  - Introduction to testing
  - Tests: Unit, integration, fault tolerance, load, and synthetic
  - Product and service integrations
- Module 10: Security automation
  - Introduction to DevSecOps
  - Security of the Pipeline
  - Security in the Pipeline
  - Threat Detection Tools
  - Demonstration: AWS Security Hub, Amazon GuardDuty, AWS Config, and Amazon Inspector
- Module 11: Configuration management
  - Introduction to the configuration management process
  - AWS services and tooling for configuration management
  - Hands-on lab: Performing blue/green deployments with CI/CD pipelines and Amazon Elastic Container Service (Amazon ECS)
- Module 12: Observability
  - Introduction to observability
  - AWS tools to assist with observability

- Hands-on lab: Using AWS DevOps tools for CI/CD pipeline automations
- Module 13: Reference architecture (Optional module)
  - Reference architectures
- Module 14: Course summary
  - Components of DevOps practice
  - CI/CD pipeline review
  - AWS Certification

## Wymagania:

We recommend that attendees of this course have:

- Previous attendance at the Systems Operations on AWS or Developing on AWS courses
- Working knowledge of one or more high-level programming languages, such as C#, Java, PHP, Ruby, Python
- Intermediate knowledge of administering Linux or Windows systems at the command-line level
- Two or more years of experience provisioning, operating, and managing AWS environments

## Poziom trudności

## Certyfikaty:

The participants will obtain certificates signed by AWS (course completion).

This course also helps you prepare for the AWS Certified DevOps Engineer – Professional DOP-C02 exam and this way gain the AWS Certified DevOps Engineer – Professional title – professional level. AWS certification exams are offered at Pearson Vue test centers worldwide
