Cel szkolenia:

This course uses lectures and hands-on exercises to give participants real-time experience in setting up and configuring the BIG-IP Advanced Firewall Manager system. Students are introduced to the AFM user interface, stepping through various options that demonstrate how AFM is configured to build a network firewall and to detect and protect against DoS (Denial of Service) attacks. Reporting and log facilities are also explained and used in the course labs. Further Firewall functionality and additional DoS facilities for DNS and SIP traffic are discussed.

Audience:

This course is intended for system administrators, network administrators, security administrators, and security architects responsible for installation, setup, configuration, and administration of the BIG-IP Advanced Firewall Manager (AFM) system.

Course is based on the system version v14.
