## Cel szkolenia:

This course teaches IT professionals how to discover, assess, plan and implement a migration of on-premises resources and infrastructure to Azure. Students will learn how to use Azure Migrate to perform the discovery and assessment phase that is critical to a successful migration. Students will also learn how to use Azure Site Recovery for performing the actual migration of workloads to Azure. The course focuses primarily on using ASR on a Hyper-V infrastructure to prepare and complete the migration process. In addition, students learn about other scenarios, such as migration of VMware vSphere Hypervisor virtual machines and System Center VMM Hyper-V machines.

## Audience profile:

- This course is for Azure Administrators. Azure Administrators manage the cloud services that span storage, networking, and compute cloud capabilities, with a deep understanding of each service across the full IT lifecycle. They take end-user requests for new cloud applications and make recommendations on services to use for optimal performance and scale, as well as provision, size, monitor and adjust as appropriate. This role requires communicating and coordinating with vendors. Azure Administrators use the Azure Portal and as they become more proficient they use PowerShell and the Command Line Interface.

## After completing this course, students will be able to:

- Use Azure Migrate to discover and assess on-premises virtual machine migration to Azure.
- Use Azure Site Recovery to migrate Hyper-V infrastructures to Azure.
- Review migration strategies for VMWare and System Center VMM virtual machines.

## Plan szkolenia:

- Managing Azure Active Directory
  - Overview of Cloud Migration
  - Azure Migrate: The Process
- Azure Site Recovery
  - Overview of ASR
  - Preparing the Infrastructure
  - Completing the Migration Process
- Additional Migration Scenarios
  - VMWare Migration
  - System Center VMM Migration: Video Walkthrough

## Wymagania:

- Successful Azure Administrators start this role with experience on operating systems, virtualization, cloud infrastructure, storage structures, and networking.
