Cel szkolenia:

In this 1-day class, candidates will learn how to configure and administrate the most commonly used features of a FortiADC. In interactive labs, candidates will explore Layer 4 and Layer 7 server load balancing, link load balancing, global load balancing, high availability, firewall policies, advanced routing, and more. These administrative fundamentals will provide candidates with a solid understanding of how to implement an application delivery controller.

Course is based on the FortiADC version 4.4

After completing this course, candidates will be able to:

- Describe the advanced load balancing features of FortiADC VM / D series platforms
- Deploy FortiADC
- Intelligently distribute traffic among multiple servers based on the content of the TCP or HTTP layer
- Automatically route the traffic to another server if a problem is detected
- Load balance inbound & outbound traffic among multiple redundant Internet uplinks
- Distribute traffic among data centers in different geographical locations
- Improve performance by offloading the compression, and encryption and decryption of SSL/TLS traffic to FortiADC
- Protect your servers from connection attempts coming from malicious IP addresses
- Implement HA for failover protection

- Harden the network by using security features on FortiADC

Who Should Attend:

- Anyone who is responsible for day-to-day management of a FortiADC VM or D series appliance.
