2025-09-30 | 4 days | Warszawa / Virtual Classroom  
2025-10-28 | 4 days | Kraków / Virtual Classroom  
2025-12-23 | 4 days | Warszawa / Virtual Classroom

## TRAINING GOALS:

When a business is hit by a natural disaster, cybercrime or any other disruptive tragedy, how should the organization react? What if the network infrastructure is taken down? Will the business be able to continue operations? How much will it cost if the business is down during repairs?

The answer is found in the vendor-neutral Certified Disaster Recovery Engineer certification course. Disaster recovery and business continuity planning is the process of having a professional work with a business to prepare processes, policies, and procedures to follow in the event of a disruption. The goal is to keep a business' critical operations running, which today relies heavily on its IT infrastructure.

The comprehensive Certified Disaster Recovery Engineer course goes beyond traditional BCP training - preparing students for industry certification in Business Continuity planning, and presenting the latest methodologies and best practices for real-world systems recovery. Students will receive a solid foundation of instruction that will enable them to create meaningful business continuity plans.

Upon completion:

The Certified Disaster Recovery Engineer students will be able to establish industry acceptable DR & BCP standards with current best practices and policies. Students will also be prepared to competently take the C)DRE exam.

Who Should Attend:

- IS Security Officers
- IS Managers
- Risk Managers
- DR & BCP engineers
- Information Systems Owners
- IS Control Assessors
