CO1 COMPENDIUM CENTRUM EDUKACYJNE

Training: AWS
Planning and Designing Databases on AWS

aws PARTNER Select Tier Training

TRAINING GOALS:

In this course, you will learn about planning and designing your solutions with purpose-built Amazon Web Services (AWS) Cloud databases. The course introduces you to the features and characteristics of each of these databases and shares the design considerations that you should make while using them. By taking this course, you can develop the analytical skills needed to choose the right AWS database for your unique needs.

By the end of the course, you will be able to analyze a business use case, analyze the workload, and assess application requirements to identify and design the most suitable AWS database solution to support your organizational needs.

Course objectives

In this course, you will learn how to do the following:

- Summarize the AWS Well-Architected Framework for designing database solutions.
- Choose an appropriate purpose-built database service for a given workload.
- Design a relational database solution to solve a business problem.
- Design a NoSQL database solution to solve a business problem.
- Analyze data from multiple databases to solve a business problem.
- Discuss the security considerations for your database solution.

Intended audience

This course is intended for learners in the following roles:

- Solutions architects
- Database architects
- Developers

CONSPECT:

- Module 1: AWS Purpose-Built Databases
  - Discussing well-architected databases
  - Analyzing workload requirements

CO1

- Choosing the data model

- Choosing the right purpose-built database

- Knowledge check

- Module 2: Amazon Relational Database Service (Amazon RDS)

  - Discussing a relational database

  - What is Amazon RDS?

  - Why Amazon RDS?

  - Amazon RDS design considerations

  - Knowledge check

- Module 3: Amazon Aurora

  - What is Amazon Aurora?

  - Why Amazon Aurora?

  - Aurora design considerations

  - Knowledge check

- Challenge Lab 1: Working with Amazon Aurora databases

- Class Activity 1: Choose the Right Relational Database

- Module 4: Amazon DynamoDB

  - Discussing a key value database

  - What is DynamoDB?

  - Why DynamoDB?

  - DynamoDB design considerations

  - Knowledge check

- Module 5: Amazon Keyspaces (for Apache Cassandra)

  - Discussing a wide-column database

  - What is Apache Cassandra?

  - What is Amazon Keyspaces?

  - Why Amazon Keyspaces?

  - Amazon Keyspaces design considerations

  - Knowledge check

- Module 6: Amazon DocumentDB (with MongoDB compatibility)

  - Discussing a document database

  - What is Amazon DocumentDB?

  - Why Amazon DocumentDB?

  - Amazon DocumentDB design considerations

  - Knowledge check

- Module 7: Amazon Quantum Ledger Database (Amazon QLDB)

- Discussing a ledger database
- What is Amazon QLDB?
- Why Amazon QLDB?
- Amazon QLDB design considerations
- Knowledge check
- Class Activity 2: Choose the Right Nonrelational Database
- Challenge Lab 2: Working with Amazon DynamoDB Tables
- Module 8: Amazon Neptune
  - Discussing a graph database
  - What is Amazon Neptune?
  - Why Amazon Neptune?
  - Amazon Neptune design considerations
  - Knowledge check
- Module 9: Amazon Timestream
  - Discussing a timeseries database
  - What is Amazon Timestream?
  - Why Amazon Timestream?
  - Amazon Timestream design considerations
  - Knowledge check
- Module 10: Amazon ElastiCache
  - Discussing an in-memory database
  - What is ElastiCache?
  - Why ElastiCache?
  - ElastiCache design considerations
  - Knowledge check
- Module 11: Amazon MemoryDB for Redis
  - What is Amazon MemoryDB (for Redis)?
  - Why Amazon MemoryDB?
  - Amazon MemoryDB design considerations
  - Knowledge check
- Class Activity 3: Let's Cache In
- Module 12: Amazon Redshift
  - Discussing a data warehouse
  - What is Amazon Redshift?
  - Why Amazon Redshift?
  - Amazon Redshift design considerations

- Knowledge check
- Module 13: Tools for Working with AWS Databases
    - Data access and analysis with Amazon Athena
    - Data migration with SCT and DMS
- Class Activity 4: Overall Picture
- Challenge Lab 3: Working with Amazon Redshift clusters

REQUIREMENTS:

We recommend the following prerequisites for attendees of this course:

- Familiarity with AWS database services
- Understanding of database design concepts and/or data modeling for relational or nonrelational databases
- Familiarity with cloud computing concepts
- Familiarity with general networking and encryption concepts
- Completion of the digital course Introduction to Building with AWS Databases

Difficulty level

CERTIFICATE:

The participants will obtain certificates signed by AWS (course completion).

This course also helps you prepare for the AWS Certified Database - Specialty DBS-C01exam and this way gain the AWS Certified Database - Specialty title – specialty level. AWS certification exams are offered at Pearson Vue test centers worldwide https://home.pearsonvue.com/Clients/AWS.aspx

TRAINER:

AWS Authorized Instructor (AAI)
