

Training: Red Hat
RH299 RHCE Certification Lab

Please contact us by phone using the form below in order to perform calculations as training

TRAINING GOALS:

The **RHCE® Certification Lab (RH299)** is designed for students seeking a hands-on, lab-based review prior to taking the [Red Hat Certified Engineer \(RHCE\) exam](#). Students taking this course should have already completed their classroom training and simply be preparing to take or retake the exam. During the 4-day course, students will work at their own pace through the complete set of labs from both the [RHCSA Red Hat Certified System Administrator Rapid Track course \(RH199\)](#) and [Red Hat System Administration III \(RH254\)](#). The **RHCE Certification Lab** course includes a few instructor lectures designed to review key technologies such as systemd, firewalld, and IPv6. For the classroom and virtual classroom versions of this course, an instructor will be available throughout the week to assist students as they work through the labs.

CONSPECT:

- Local and remote logins
 - Review methods for accessing the system and engaging Red Hat Support.
- File system navigation
 - Copy, move, create, delete, link, and organize files while working from the Bash shell prompt.
- Users and groups
 - Manage Linux users and groups and administer local password policies.
- File permissions
 - Control access to files and directories using permissions and access control lists (ACLs).
- SELinux permissions
 - Manage the SELinux behavior of a system to keep it secure in case of a network service compromise.
- Process management
 - Evaluate and control processes running on a Red Hat Enterprise Linux system.
- Updating software packages
 - Download, install, update, and manage software packages from Red Hat and yum package repositories.

- Creating and mounting file systems
 - Create and manage disks, partitions, and filesystems from the command line.
- Service management and boot troubleshooting
 - Control and monitor system daemons and troubleshoot the Red Hat Enterprise Linux boot process.
- Network configuration
 - Configure basic IPv4 networking on Red Hat Enterprise Linux systems.
- System logging and ntp
 - Locate and accurately interpret relevant system log files for troubleshooting purposes.
- Logical volume management
 - Create and manage logical volumes from the command line.
- Scheduled processes
 - Schedule tasks to automatically execute in the future.
- Mounting network file systems
 - Use autofs and the command line to mount and unmount network storage with NFS and SMB.
- Firewall configuration
 - Configure a basic firewall.
- Virtualization and kickstart
 - Automate the installation of Red Hat Enterprise Linux on virtual machines with Kernel-based Virtual Machine (KVM) and libvirt.
- Managing IPv6 networking
 - Configure and troubleshoot basic IPv6 networking on Red Hat Enterprise Linux systems.
- Configuring link aggregation and bridging
 - Configure and troubleshoot advanced network interface functionality including bonding, teaming, and local software bridges.
- Controlling network port security
 - Permit and reject access to network services using advanced SELinux and firewalld filtering techniques.
- Managing DNS for Servers
 - Set and verify correct DNS records for systems and configure secure-caching DNS.
- Configuring E-mail Delivery
 - Relay all e-mail sent by the system to a SMTP gateway for central delivery.
- Providing block-based storage
 - Provide and use networked iSCSI block devices as remote disks.
- Providing file-based storage
 - Provide NFS exports and SMB file shares to specific systems and users.
- Configuring MariaDB databases

- Provide a MariaDB SQL database for use by programs and database administrators.
- Providing Apache HTTPD Web Service
 - Configure Apache HTTPD to provide Transport Layer Security (TLS)-enabled websites and virtual hosts.
- Writing Bash scripts
 - Write simple shell scripts using Bash.
- Bash conditionals and control structures
 - Use Bash conditionals and other control structures to write more sophisticated shell commands and scripts.
- Configuring the shell environment
 - Customize Bash startup and use environment variables, Bash aliases, and Bash functions.

REQUIREMENTS:

- Students should have already completed Red Hat System Administration I, II, and III or equivalent training.
- It is highly recommended students take our online skills assessment prior to enrolling in this course.
- Extensive UNIX administration experience by itself is not adequate for most students.
- You can check your knowledge about Red Hat Enterprise Linux for free at:
https://www.redhat.com/rhtapps/assessment/?partner=compendium_centrum

Difficulty level

CERTIFICATE:

Participants will obtain certificates signed by Red Hat.

TRAINER:

Red Hat Certified Instructor
