

Training: Capstone Courseware 560 Overview of Java Web Services

## TRAINING GOALS:

This course provides an **overview of web services development in the Java EE platform**, starting with a look at interoperable standards and then delving into Java technology to implement them. We look at both the SOAP-oriented and RESTful schools of service architecture. Then we look at examples of services developed using the APIs that are standard to the Java EE 6 platform: JAX-WS, SAAJ, and JAX-RS in particular.

Though it includes plenty of code and message-content details, and some short labs at the end of the day, this course is intended to be useful both to Java develoers and to non-developers who wish to gain familiarity with the key concepts of web services and Java WS technology.

## CONSPECT:

- Chapter 1. Overview of Web Services
  - Why Web Services?
  - Service-Oriented Architecture
  - $\circ~$  HTTP and XML
  - SOAP
  - WSDL
  - The SOAP Vision
  - $\circ~$  The REST Vision
  - UDDI
  - The WS-I Basic Profile
  - Security
- Chapter 2. Web Services for Java EE
  - Hosting Web Services: Scenarios
  - Web Services for Java EE
  - JAX-WS and JAXB
  - Web-Services Metadata
  - $\circ~\text{WSDL-to-Java}$  and Java-to-WSDL Paths
  - Provider and Dispatch APIs
  - SAAJ and JAXP

- JAX-RS for RESTful Services
- JAXR

Appendix A. Course Tools and Utilities

Appendix B. Handy Guide to Web-Services Acronyms

## **REQUIREMENTS:**

• Java programming experience is assumed, and is necessary for the lab exercises. But those without Java skills can still profit from taking the course, so this is not a hard prerequisite.

Difficulty level

## CERTIFICATE:

The participants will obtain certificates signed by Capstone Courseware.

TRAINER:

Authorized Capstone Courseware Trainer.
